**INCIDENT TO**

Definition:

technical services that are an extension of the professional (services)

inpatient is generally considered as any service provided in an inpatient setting (e.g., hospital), in an office associated with or located within the physical building, or related legally or financially to an inpatient setting; and most likely most, if not all, nursing homes and skilled nursing facilities

Billing:

it is acceptable to provide technical services at any location (within the scope of practice and the law) if it is incorrect to bill for incident to services in an inpatient situation for Medicare patient

The development of new Current Procedural Terminology (CPT) codes has allowed for more accurate billing of neuropsychological services. This has occurred, in part, because the new neuropsychology codes are located in new sections of the CPT system, outside of the psychiatry codes. However, many neuropsychologists have continued to use the *Diagnostic and Statistical Manual (DSM)* system to code diagnoses. This combination of non-psychiatric procedural codes and psychiatric diagnostic codes reflects an inconsistency when describing professional neuropsychological services. Hence, it is recommended that non-psychiatric (e.g., neurological) diagnostic codes be used in conjunction with the new neuropsychological procedure codes.

We have reviewed the International Classification of Diseases (9th revision) for commonly used neurological and related diagnostic codes. These codes have been used during the last year in our clinical practice with input from several members of the Academy. Further, these diagnostic codes are presented both alphabetically and categorically (with the assistance of Leslie Rosenstein, Ph.D.; Scott & White Memorial Hospital, Temple, Texas)

These codes are being reprinted with permission of the World Health Organization, developers and publishers of the International Classification of Diseases system. However, the publication of this list does not imply the endorsement. This list is preliminary and we look forward to input from colleagues for eventual revision both in terms of codes and categories. Please address your suggestions to:
